This small application is a clock designed to resemble a Nixie tube, as in old mechanical clocks. It has a simple interface, easy to use and takes up very little space. Time and date A Nixie tube clock has eight vertical bars that, when illuminated, come together to form a time display. You can choose between three different color schemes for the bars: analog, color and no bars. In addition, you can display the date either on the

clock itself or as an icon next to the time. Tip: In the clock settings you can choose to have the clock shown with the day of the week, the date and month or only with the date. Timekeeping This application keeps track of the time automatically or you can keep it in sync with a web server. However, you can also choose to have the time keep in sync with the computer's hardware clock, which is something that is not possible with the built-in Windows clock. Other features With this clock,

you can use a stopwatch. In addition, you can decide to display the time in 12-hour or 24-hour format. You can also choose between a dark or a light titlebar. You can change the background color of the clock, as well as the color of the digital display.
