Introduction {#sec1} ===== Cyclic vomiting syndrome (CVS) is a relatively common, self-limited disorder characterized by recurrent, brief, and severe episodes of vomiting, usually with prodromal symptoms. The stereotypical, associated symptoms are abdominal pain and nausea, and patients may complain of diarrhea. The majority of affected individuals are adolescents and young adults; however, CVS has been described in all age groups.^[@bib1]^ Patients with CVS often present to the emergency department (ED) with nausea and vomiting and describe migraine-like headaches with visual or auditory auras. An appropriate response is to admit the patient to an observation unit with either a diagnosis of nausea and/or vomiting without further evaluation and treatment.^[@bib2],[@bib3]^ However, the relationship between CVS and migraine is not well understood. CVS is a controversial diagnosis. In a recent article in the *New England Journal of Medicine*, Riviere et al^[@bib4]^ stated that the term "CVS" may be misleading because there are "multiple types of recurrent vomiting" and "prodromal symptoms" are not specific for CVS. An alternative is the term "recurrent vomiting syndrome," although this is not commonly used in the medical literature. Currently, CVS is considered a functional gastrointestinal disorder^[@bib5]^ and is most often precipitated by nonpharmacologic factors, such as stress, illness, and menstruation.^[@bib6]^ Treatment of CVS involves reassurance, lifestyle modifications, and antiemetic therapy. In an observational study of 162 adolescents and young adults, the majority of patients received reassurance, lifestyle modifications, and antiemetics; the median time to resolution was 6 days.^[@bib7]^ Tricyclic antidepressants have been used in the treatment of patients with CVS,^[@bib8]-[@bib10]^ but a recent meta-analysis found that they have minimal effect.^[@bib11]^ The antiemetic agent ondansetron has also been used effectively for the treatment of CVS.^[@bib12]^ Although previous studies have focused on adults with CVS, relatively little is known about the natural history of the disorder in children. The present study was performed to describe the presentation and treatment of CVS in pediatric patients at a large, urban, tertiary care pediatric hospital. Methods {#sec2} ===== This study was approved by the institutional review board. The medical records of all patients discharged with a diagnosis of CVS from January 1, 2012, to December 31, 2015, were reviewed. A diagnosis of CVS was made by the treating physician and was considered "definite" if all of the following
