Adobe Photoshop comes with a number of important productivity features. Users can save multiple variations of an image in one single file, or load up to dozens of graphics at the click of a button in miles and miles of variations. One cool feature is the ability to tell Photoshop when to save out an image. Users can tell Photoshop what to save out depending on the size of the file, the type of file, and many other factors. One of the most frequently overlooked features of a designer's life is cloud storage. Prints, advertisements, spreads,

breakouts, and so on, files are ever-increasing in size for designers. For them, it can become difficult to keep in sync across the office and also in different locations. To the rescue comes Adobe's powerful Cloud solution. With Project Aero cloud, files are saved and downloaded on the device of choice, depending on the basic version you choose. With Creative Cloud, all your files and edits are in the Cloud. And the theme extends beyond the desktop. Adobe has been releasing a new Photoshop app for tablets (except Apple iPad). While the app is designed to work specifically with the iPad Pro and Mac Pro, you can use the app for any iPad. The Photoshop app combines Photoshop's best features available across any device. One Adobe feature is to save time, and keep things organized. With this version of Photoshop, users can save 30 variations of a file at once. Users can even save to their inbox if you don't want to read a file from a folder.
